## TRANSMITTAL OF INFORMATION DISCLOSURE STATEMENT

Commissioner for Patents P.O. Box 1450 Alexandria, VA 22313-1450

Dear Sir:

Transmitted herewith is an Information Disclosure Statement disclosing information which has come to the attention of applicant and/or his attorneys and is being submitted so as to comply with the duty of disclosure set forth in 37 C.F.R. § 1.56. In accordance with 37 C.F.R. § 1.97(b), the enclosed Statement is being filed within three (3) months of the filing date of the above-identified application or before the mailing date of a first Action on the merits.

Neither applicant nor his attorneys make any representation that any information disclosed herein may be "prior art" within the meaning of that term under 35 U.S.C. § 102 or § 103. Moreover, pursuant to 37 C.F.R. § 1.97, the filing of this Information Disclosure Statement shall not be construed as a representation that a search has been made or as an admission that the information cited herein is, or is considered to be, material to patentability as defined in 37 C.F.R. § 1.56(b).

In accordance with 37 C.F.R. § 1.98, transmitted herewith are:

- 1. A completed copy of Form PTO/SB/08A "Information Disclosure Statement by Applicant" listing the patents, publications and other information being submitted for consideration; and
- 2. A legible copy of each patent, publication and other item of information in written form listed on the enclosed Form PTO/SB/08A.

## NON-ENGLISH INFORMATION

Pursuant to 37 C.F.R. § 1.98, following is a concise explanation of the relevance (as it is presently understood by the individual designated in 37 C.F.R. § 1.56(c) most knowledgeable about the content of the information), of each listed patent, publication or other information that is not in the English language:

1. Japanese Patent No. JP63083825 published April 14, 1988 discloses: A monitoring method for printing state without deteriorating the printing efficiency by realizing the communication of messages between a print control program and an interruption processing program which is started by an interruption given from a laser printer. A print control program starts successively the print programs based on the control data. A laser printer evolves a print image of a single page and applies an interruption to a word processor when a print job is over to process the next page. A fact that the print job of a single page is through is informed in a message to the print control program through the interruption processing of a printer driver received an interruption. Receiving said message, the print control program replaces the monitor information on the print state and at the same time displays the latest print state. Meanwhile the print program can perform the print processing quite independently of said processes. Thus it is possible to ensure the fine monitor of the print state without deteriorating the parallel processing efficiency of both the laser printer and the word processor.

Respectfully submitted,

Wesley L. Austin
